

**In the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

- 1 1. (Currently Amended) A device for emitting water into the inside of a  
2 container comprising a tube having one end adapted to be attached to a  
3 source of water, a spray head carried by the other end of said tube, a  
4 plunger ~~normally~~ having a nose at one end normally extending out of said  
5 spray head and a base at the other end, and a seal in said spray head,  
6 said ~~plunger including~~ base having a rim ~~positioned~~ extending upwardly  
7 therefrom to press into said seal.
- 1 2. (Original) The device of claim 1 further comprising a shelf formed in said  
2 spray head, said seal having a surface the majority of which is received  
3 on said shelf.
- 1 3. (Original) The device of claim 2 further comprising at least one rib on said  
2 shelf to press into said seal.
- 1 4. (Currently Amended) The device of claim 2 further comprising a spring in  
2 said spray head urging said ~~one end~~ nose of said plunger out of said  
3 spray head.
- 1 5. (Original) The device of claim 4 further comprising a hose having one end  
2 attached to said one end of said tube, a device at the other end of said  
3 hose and adapted to be attached to a source of water, said device  
4 including a valve and a spring to maintain said valve closed when said  
5 device is detached from the source of water to maintain any water in said  
6 hose.

- 1 6. (Original) The device of claim 2 further comprising a hose having one end  
2 attached to said one end of said tube, a device at the other end of said  
3 hose and adapted to be attached to a source of water, said device  
4 including a valve and a spring to maintain said valve closed when said  
5 device is detached from the source of water to maintain any water in said  
6 hose.
- 1 7. (Currently Amended) The device of claim 1 further comprising a spring in  
2 said spray head urging said ~~one end~~ nose of said plunger out of said  
3 spray head.
- 1 8. (Original) The device of claim 7 further comprising a hose having one end  
2 attached to said one end of said tube, a device at the other end of said  
3 hose and adapted to be attached to a source of water, said device  
4 including a valve and a spring to maintain said valve closed when said  
5 device is detached from the source of water to maintain any water in said  
6 hose.
- 1 9. (Original) The device of claim 1 further comprising a hose having one end  
2 attached to said one end of said tube, a device at the other end of said  
3 hose and adapted to be attached to a source of water, said device  
4 including a valve and a spring to maintain said valve closed when said  
5 device is detached from the source of water to maintain any water in said  
6 hose.
- 1 10. (Original) The device of claim 1 further comprising a second seal  
2 positioned between said tube and said spray head.
- 1 11. (Canceled).
- 1 12. (Currently Amended) The device of claim ~~44~~ 1, wherein said base has  
2 wings extending radially outwardly therefrom.

- 1 13. (Currently Amended) The device of claim 1 wherein said base  
2 includes a stem and further comprising a spring between said tube and  
3 said base, and received around said stem, to urge said nose out of said  
4 spray head.
- 1 14. (Original) The device of claim 1 wherein said spray head has a top  
2 surface with an aperture therein, said plunger extending through said  
3 aperture.
- 1 15. (Original) The device of claim 14 further comprising spray apertures  
2 adjacent to said aperture adapted to allow water to pass therethrough.
- 1 16. (Original) The device of claim 15 further comprising generally radially  
2 directed spray apertures in said spray head.
- 1 17. (Currently Amended) The device of claim 1 wherein said plunger includes  
2 a ~~base having a stem extending upwardly therefrom~~ from said base, and  
3 a said nose being received over said stem, said nose being thereby  
4 removable from said base.
- 1 18. (Original) The device of claim 17 wherein said nose has an outer tapered  
2 wall.
- 1 19. (Original) The device of claim 18 wherein said spray head has a top  
2 surface with an aperture therein, the majority of said nose being freely  
3 moveable through said aperture but a portion of said wall of said nose  
4 being larger than said aperture.
- 1 20. (Currently Amended) A device for emitting water into the inside of a  
2 container comprising a tube having one end adapted to be attached to a  
3 source of water, a spray head carried by the other end of said tube, a

4           plunger normally having one end extending out of said spray head, a  
5           shelf formed in said spray head, and a seal having a surface the majority  
6           of which is received on said shelf, and at least one rib extending from  
7           said shelf to press into said seal.

1   21.   (Original) The device of claim 20 further comprising a spring in said spray  
2           head urging said one end of said plunger out of said spray head.

1   22.   (Original) The device of claim 21 further comprising a hose having one  
2           end attached to said one end of said tube, a device at the other end of  
3           said hose and adapted to be attached to a source of water, said device  
4           including a valve and a spring to maintain said valve closed when said  
5           device is detached from the source of water to maintain any water in said  
6           hose.

1   23.   (Original) The device of claim 20 further comprising a hose having one  
2           end attached to said one end of said tube, a device at the other end of  
3           said hose and adapted to be attached to a source of water, said device  
4           including a valve and a spring to maintain said valve closed when said  
5           device is detached from the source of water to maintain any water in said  
6           hose.

1   24.   (Canceled).

1   25.   (Original) The device of claim 20, said plunger including a nose at said  
2           one end, and a base at the other end, said base having a rim to press  
3           into said seal.

1   26.   (Original) The device of claim 25 wherein said base includes a stem and  
2           further comprising a spring between said tube and said base, and  
3           received around said stem, to urge said nose out of said spray head.

1 27. (Original) The device of claim 20 wherein at least eighty percent of the  
2 surface of said seal is received on said shelf.

1 28. (Currently Amended) A device for emitting water into the inside of a  
2 container comprising a tube having one end adapted to be attached to a  
3 source of water, a spray head carried by the other end of the tube, a  
4 plunger in said spray head, ~~and a spring in said spray head urging one~~  
5 ~~end of said plunger out of said spray head, a hose having one end~~  
6 ~~attached to said one end of said tube, and a device at the other end of~~  
7 ~~said hose and adapted to be attached to a source of water, said device~~  
8 ~~including a valve and a spring to maintain said valve closed when said~~  
9 ~~device is detached from the source of water to maintain any water in said~~  
10 ~~hose.~~

1 29. (Canceled).

1 30. (Original) The device of claim 28 wherein said plunger includes a nose at  
2 said one end and a base attached to said nose, said base including a  
3 stem, said spring engaging said stem.

1 31. (Original) A device for emitting water into the inside of a container  
2 comprising a tube, a hose having one end attached to one end of said  
3 tube, a spray head carried by the other end of said tube, a connecting  
4 device at the other end of said hose and adapted to be attached to a  
5 source of water, said connecting device including a valve and a spring to  
6 maintain said valve closed when said connection device is detached from  
7 the source of water to maintain any water in said hose.

1 32. (Original) The device of claim 31 wherein said connecting device includes  
2 a connector adapted to engage a faucet and a portion carried by said  
3 hose and adapted to engage said connector, said portion including said  
4 valve and said spring.

1     33.     (Original) The device of claim 32 wherein said portion includes a push  
2             button to release said portion from said connector.

1     34.     (Original) The device of claim 31 further comprising a base carrying said  
2             tube, said hose being received in said base and being connected to said  
3             tube.

1     35.     (Original) The device of claim 34 further comprising feet on said base so  
2             that said base may be attached to a surface.

1     36.     (Original) A device for emitting water into the inside of a container  
2             comprising a tube, a hose having one end attached to one end of said  
3             tube, a spray head carried by the other end of said tube, a plunger in said  
4             spray head, a spring in said spray head urging one end of said plunger  
5             out of said spray head, a shelf formed in said spray head, a seal having a  
6             surface the majority of which is received on said shelf, said plunger  
7             including a rim to press into said seal, and a connecting device at the  
8             other end of said hose and adapted to be attached to a source of water,  
9             said connecting device including a valve and a spring to maintain said  
10            valve closed when said connecting device is detached from the source of  
11            water to maintain any water in said hose.
